LOCALMIND AI

Sovereign On-Device Intelligence

Zero cloud dependencies. Absolute data privacy.
Uncompromised local inference.

CLARA + GGUF native engine · 100% air-gapped capable · Sub-10ms context recall

Made with GAMMA

01 · THE EXPOSURE

External intelligence creates a privacy gap

- **183 incidents per 10,000 users per month:** Netskope reported sensitive data posted to generative AI apps at this rate in large enterprises; source code was the most common exposed data type.
- Prompts and internal files can move through third-party infrastructure.
- Token-based SaaS costs scale with usage.

LocalMind keeps execution on local silicon with zero external calls.

Made with GAMMA

Three pillars make intelligence sovereign

Privacy, memory, and ownership reinforce one another.

True Offline Privacy

Local C++ execution with zero telemetry or analytics

Structured Memory

CLARA compresses context for long-term retention

Zero SaaS Overhead

Use existing workstation hardware as a capital asset

Made with GAMMA

03 · THE STACK

Air-gapped execution turns local hardware into confidential compute

A zero-trust stack for laptops and workstation GPUs, built to function without an external network.

- GGUF quantization for high-speed 4-bit and 8-bit RAM optimization
- Local vector storage with semantic indexing on NVMe SSDs
- Complete isolation for disconnected environments

Made with GAMMA

04 · THE PERFORMANCE CLAIM

Local throughput delivers speed without cloud round-trips

Benchmark claims from the supplied product outline, not independently validated test results.

48

tokens/sec

Peak execution on standard Apple M-Series or RTX silicon.

3.8

GB VRAM

Compact memory footprint under full load.

0.00

ms cloud delay

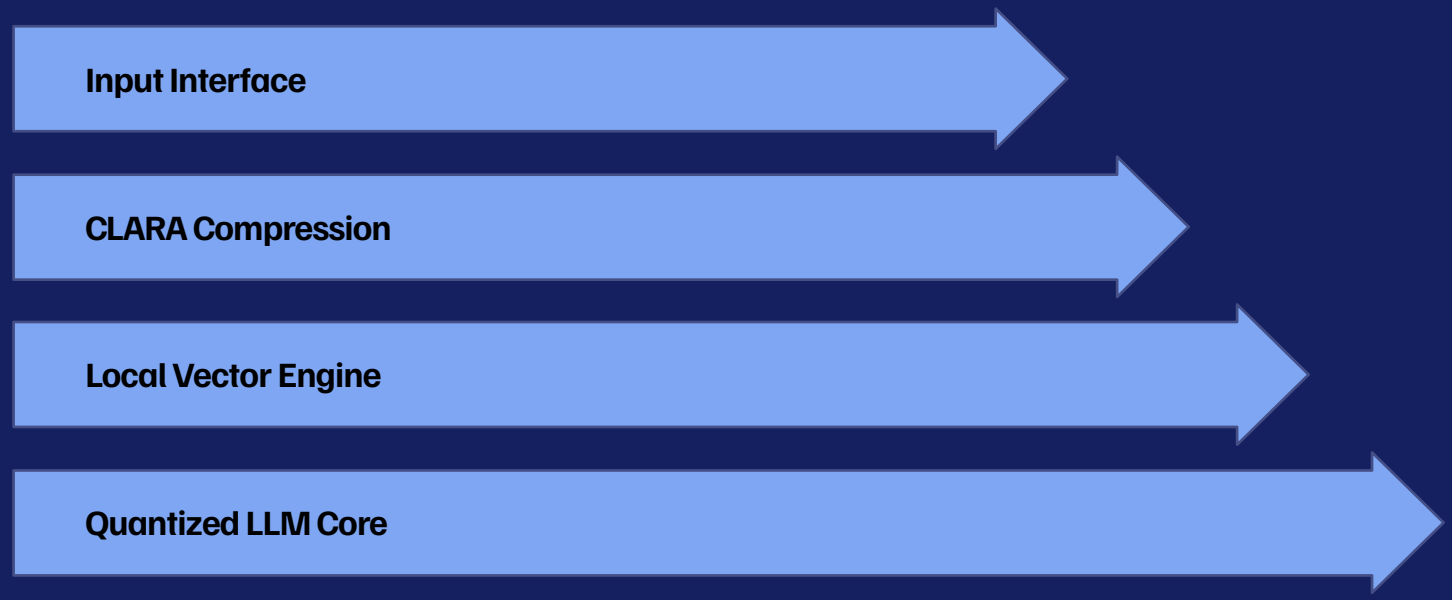

No external round-trips.

Made with GAMMA

05 · THE ARCHITECTURE

Four layers move a local document to a local answer

Every stage stays inside the controlled environment, from first input to final inference.

Made with GAMMA

06 · IN PRACTICE

Purpose-built for sensitive workflows

Local inference keeps high-consequence information inside the environment that already governs it.

Legal

Review private contracts and NDAs without third-party exposure.

Healthcare

Analyze sensitive medical notes under strict privacy standards.

Finance

Process confidential pitch decks and M&A forecasts offline.

Software

Query internal repositories without leaking IP.

Made with GAMMA

07 · THE OWNERSHIP MODEL

Fixed hardware replaces recurring SaaS exposure

CLOUD SAAS

Variable exposure

- Monthly seats
- Per-token charges
- Variable spend
- Ongoing privacy risk

LOCALMIND

Owned capacity

- $0 ongoing token fees
- Fixed local hardware utilization
- Data sovereignty

The ownership model shifts AI from recurring external exposure to controlled local infrastructure.

Made with GAMMA

Deploy in three controlled phases

Start with the hardware you have, then make isolation the operating condition.

Audit

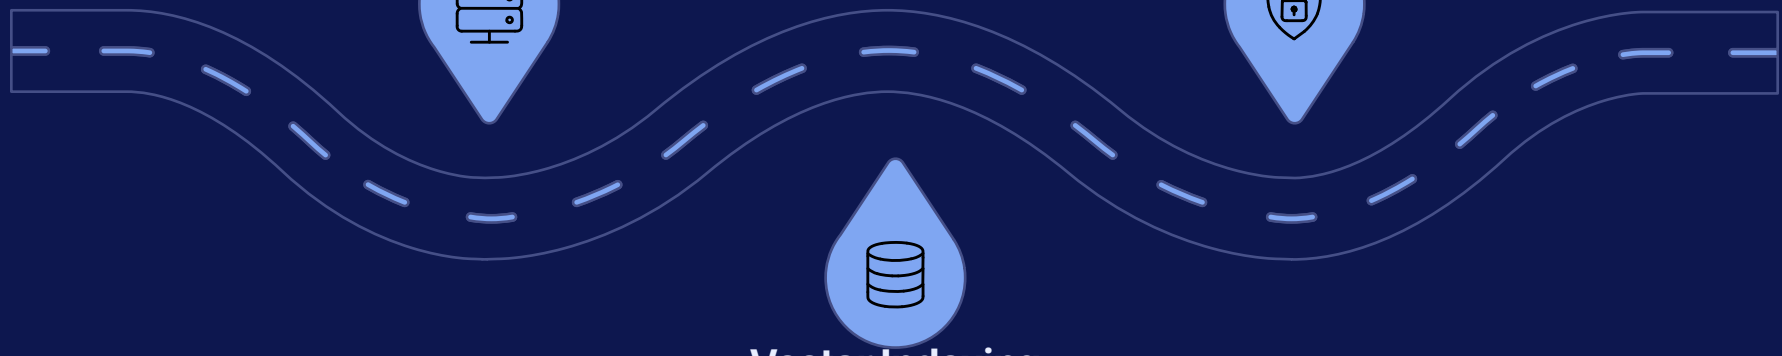

Assess local CPU/GPU and benchmark throughput

Vector Indexing

Connect databases and build local vector stores

Deployment

Run full off-grid deployment with zero external connectivity

Made with GAMMA

09

THE DECISION

Take back control of your AI

LocalMind AI brings uncompromising intelligence to local hardware with zero privacy trade-offs.

Start now

Schedule an on-premise demonstration.

Audit exposure

Review current cloud AI data exposure.

Deploy locally

Deploy a first local model instance in under 15 minutes.
